Ansible Hands-on Introduction - Red Hat

An ad-hoc command is a single Ansible task to perform quickly, but don't want to save for later # check all my inventory hosts are ready to be # managed by Ansible \$ ansible all -m ping # collect and display the discovered facts # for the localhost \$ ansible localhost -m setup # run the uptime command on all hosts in the # web group

Release 0.1 Praveen Kumar, Aditya Patawari

By default, ansible looks for the inventory file at /etc/ansible/hosts, but that can be modified by passing a -i <inventory_path> to the ansible command line We can modify the way ansible connects to our hosts by supplying additional information in the inventory file [webservers] server1 ansible_port=4242 ansible_user=adimania [application

Ultra-Low Latency Reads Per Region

Puppet or Ansible PRO Replica set nodes recover automatically, with no manual intervention required Quicker failover means higher application uptime with little to no application downtime, with consistent data across nodes Failover is transparent to applications and doesn't affect application performance
